General Advice:

- These instructions are intended as a guide only, if you are in any doubt you should seek the advice of a qualified professional.
- Take care not to mark finished parts with screwdrivers or other tools.
- Use a pair of rubber gloves to get a better grip on decorative hand tight parts.
- Ensure all parts are reassembled tightly.
- After maintenance test that all assemblies are water tight and function correctly.
- Always isolate the hot and cold water supplies before starting any maintenance, once isolated you should drain any residual water from your system.

To replace the hot valve:

- 1. Using a 2mm A/F allen key loosen the grub screw (C2) at the rear of the handle (C1).
- 2. Pull the handle (C1) horizontally away from the body of the tap (B1)
- 3. Using a spanner unscrew the valve (C3) and remove it from the body (B1)
- 4. Clean the internal chamber of the tap (B1) before inserting the new valve.
- 5. Screw the new valve tightly into tap body with a spanner.
- 6. Push the handle (C1) onto the valve stem and tighten the grub screw (C2).

To replace the spout o-rings:

- 1. Loosen grub screw (A7) on the rear of body (B1) using a 2.5mm A/F allen key.
- 2. Pull the spout (A3) vertically away from the body (B1).
- 3. Remove the old o-rings (A5 & A6) using a small screwdriver or similar.
- 4. If worn, remove the white PTFE spacer (A4).
- 5. Ensure the inside of the body (B1) and the spout base is clean of dirt and grit with a soft wet cloth.
- 6. If required locate the new white PTFE spacer (A4) on to the spout base.
- 7. Carefully locate the new O-rings (A5 & A6) onto the spout base.
- 8. Grease the O-rings (A5 & A6) thoroughly with silicone or alternative similar grease.
- 9. Reassemble the tap in the reverse order.
