General Advice:

- These instructions are intended as a guide only, if you are in any doubt you should seek the advice of a qualified professional.
- Take care not to mark finished parts with screwdrivers or other tools.
- Use a pair of rubber gloves to get a better grip on decorative hand tight parts.
- Ensure all parts are reassembled tightly.
- After maintenance test that all assemblies are water tight and function correctly.
- Always isolate the hot and cold water supplies before starting any maintenance, once isolated you should drain any residual water from your system.

To replace the valve:

1. Turn the handle (A1) to access the rear side.
2. Loosen grub screw (A2) using a 2 mm A/F Allen key.
3. Pull the handle (A1) vertically away from the tap.
4. Hold the upper body of the tap (B3) firmly. Using an adjustable spanner unscrew the valve lock nut (B1).
5. Pull the old valve cartridge (B2) away from the tap.
6. Ensure that the valve seat (B5) is clean of dirt and grit.
7. Place the new valve (B2) in the upper body (B3), ensuring the locators on the base of valve (B2) align with the recesses in the valve seat of the tap (B5).
8. Reassemble the tap in the reverse order.

To replace the sprayhead:

1. Pull the sprayhead (C1) away from the spout (B7).
2. Whilst holding spout hose nut (C3) unscrew the sprayhead (C1).
3. Replace the new sprayhead (C1) ensuring to include large seal (C2) where shown.

To replace the Spout hose:

1. Pull the sprayhead (C1) away from the spout (B7).
2. Whilst holding spout hose nut (C3) unscrew the sprayhead (C1).
3. Loosen screw (C6) and remove hose weight (C5).
4. Whilst holding mixed pipe (D1) unscrew the spout hose (C4).
5. With the spout body (B7) in its centre position pull the spout hose (C4) through the tap body (G2) and out.
6. Reassemble the tap in the reverse order.
